

Targeting Restoration in Agricultural Landscapes to Achieve Efficient and Effective Nutrient and Sediment Reduction Pocomoke River Watershed, Maryland

Amy Jacobs, Kathy Boomer, Mark Bryer

May 16, 2013

Delaware Center for the Inland Bays

Overview

- TNC's Evolving Work
- Pocomoke project and goals
- Identification of priority areas
- Implementation strategies and approaches
- Innovative approaches with poultry industry

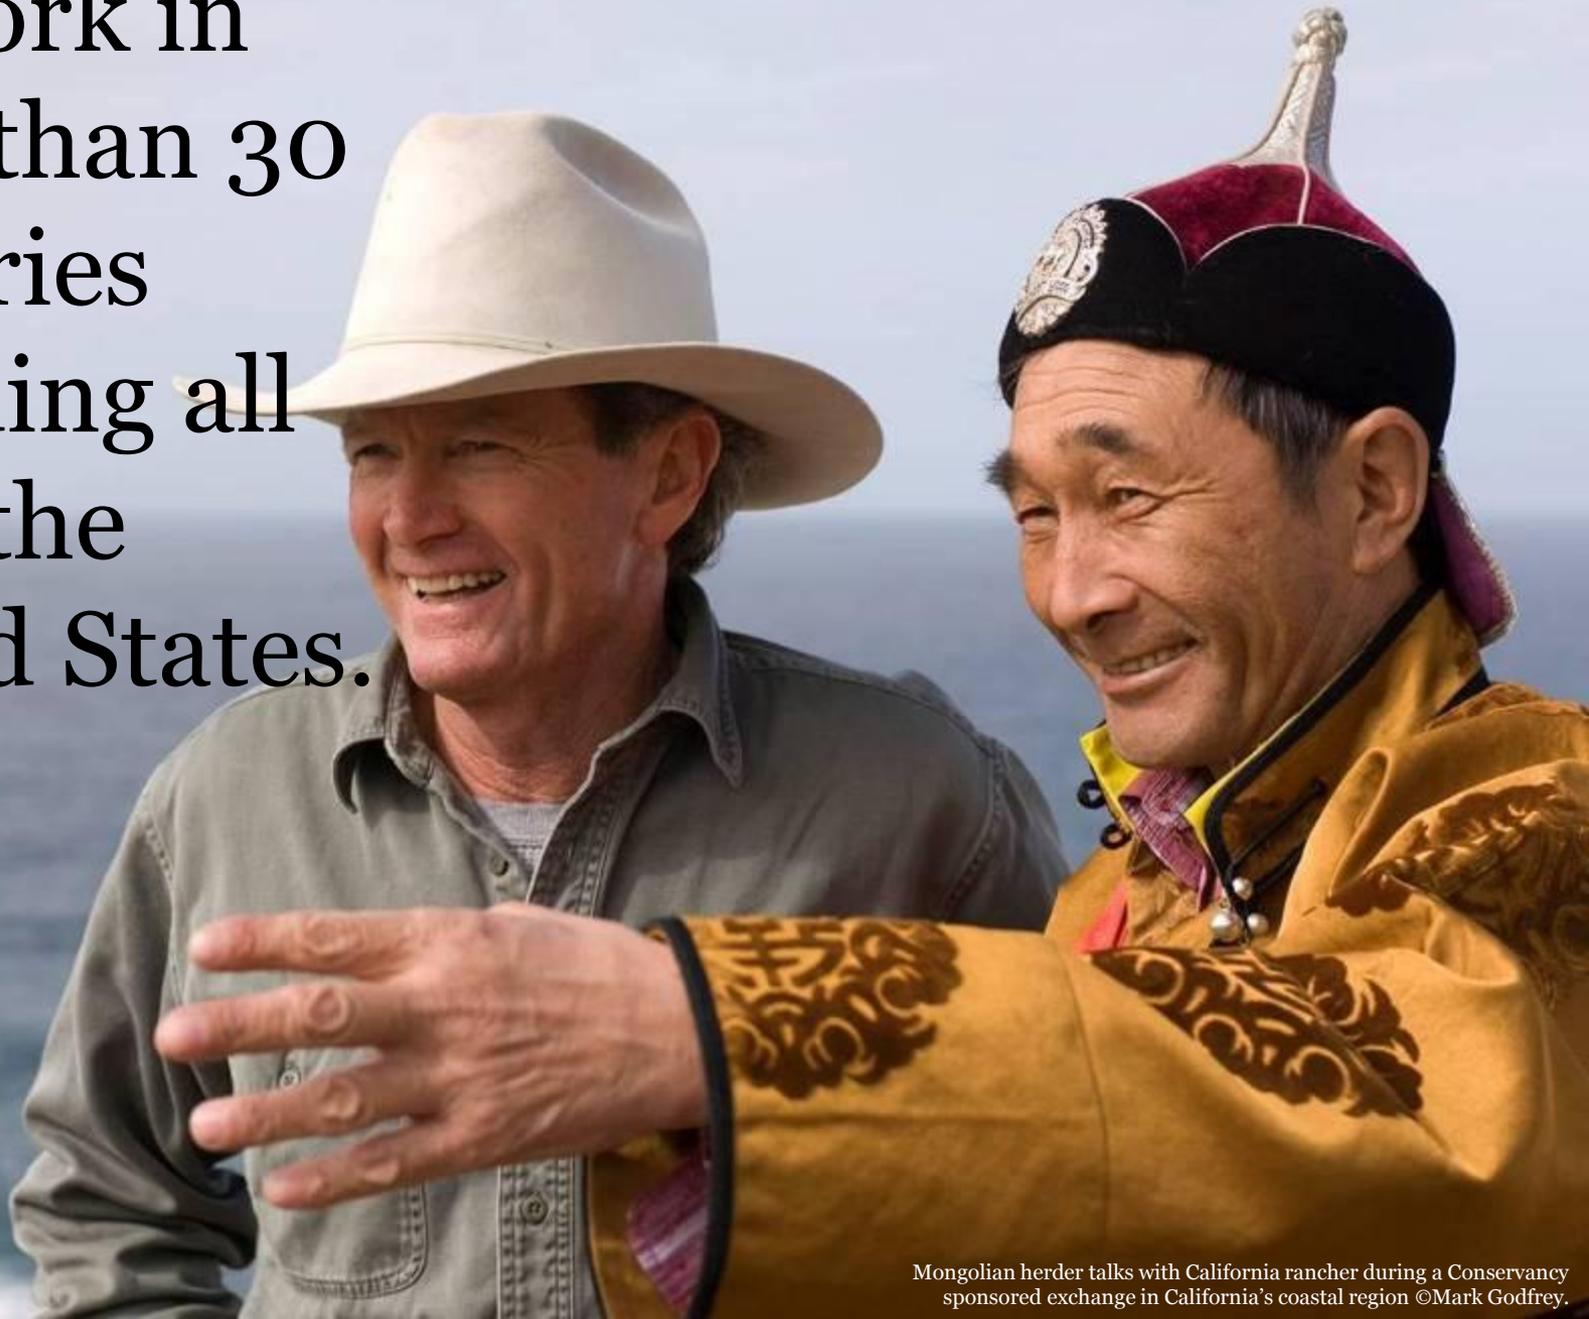

Our mission is to conserve
the lands and waters on
which all life depends.

An aerial photograph of a wide, winding river with a light blue-green hue, flowing through a vast, lush green landscape. The terrain is a mix of dense forest and open fields, with several small, irregularly shaped ponds scattered throughout. The river curves from the bottom left towards the top right, eventually curving back towards the right. The overall scene is a vibrant, natural landscape.

The Nature Conservancy
has helped protect
more than 119 million
acres of land worldwide.

We work in
more than 30
countries
including all
50 of the
United States.

A young boy with blonde hair, wearing a white long-sleeved shirt and a red life vest with a white 'S' logo, is smiling broadly while holding a large fish. He is using a fishing rod to hold the fish by its mouth. The background shows a body of water and a clear sky. The text 'We work with the trust and support of more than one million members.' is overlaid on the right side of the image.

We work
with the trust
and support
of more than
one million
members.

A large flock of birds, likely terns, is seen in flight against a clear blue sky. The birds are scattered across the upper two-thirds of the frame, appearing as small dark silhouettes. Below them, a field of mature, golden-brown corn stalks stretches across the bottom third of the image. The overall scene is bright and clear, suggesting a sunny day.

The Nature Conservancy is
evolving to meet the
challenges of today...

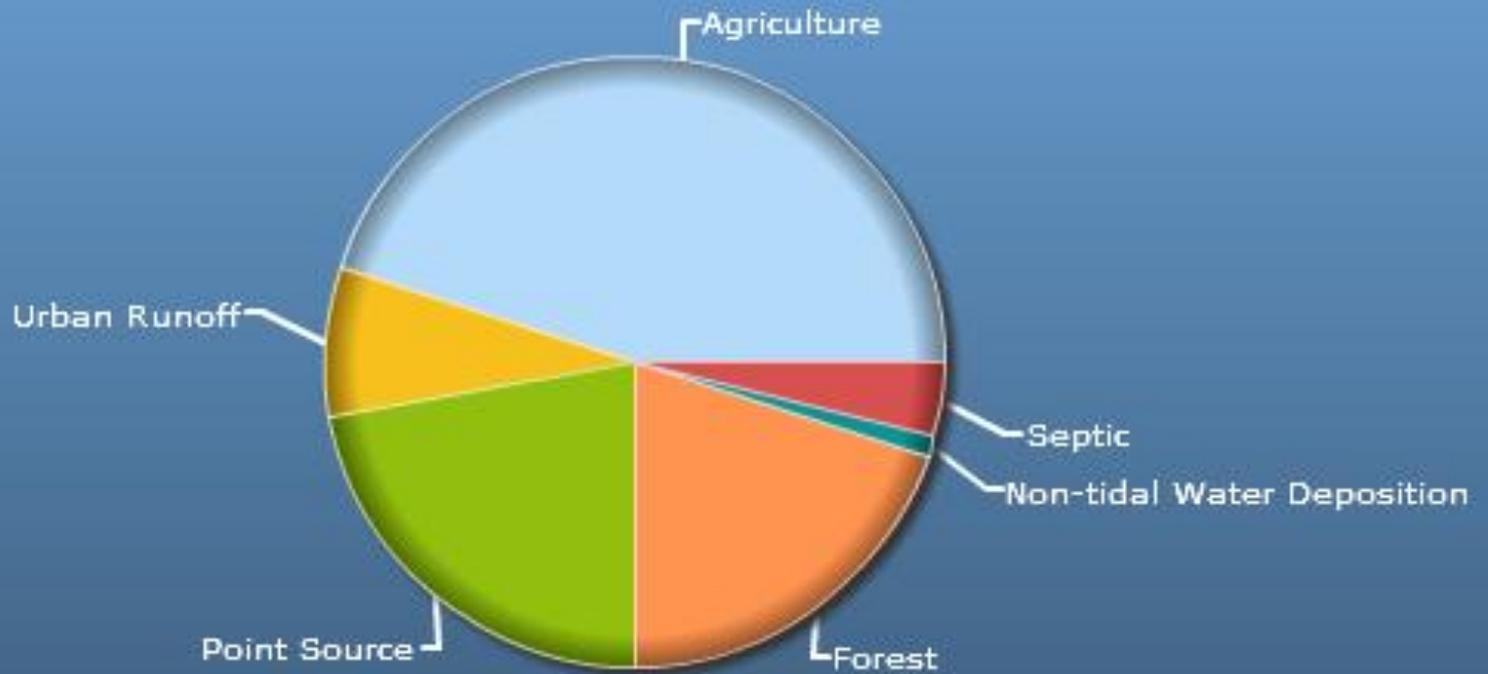

...for the benefit of both people and nature.

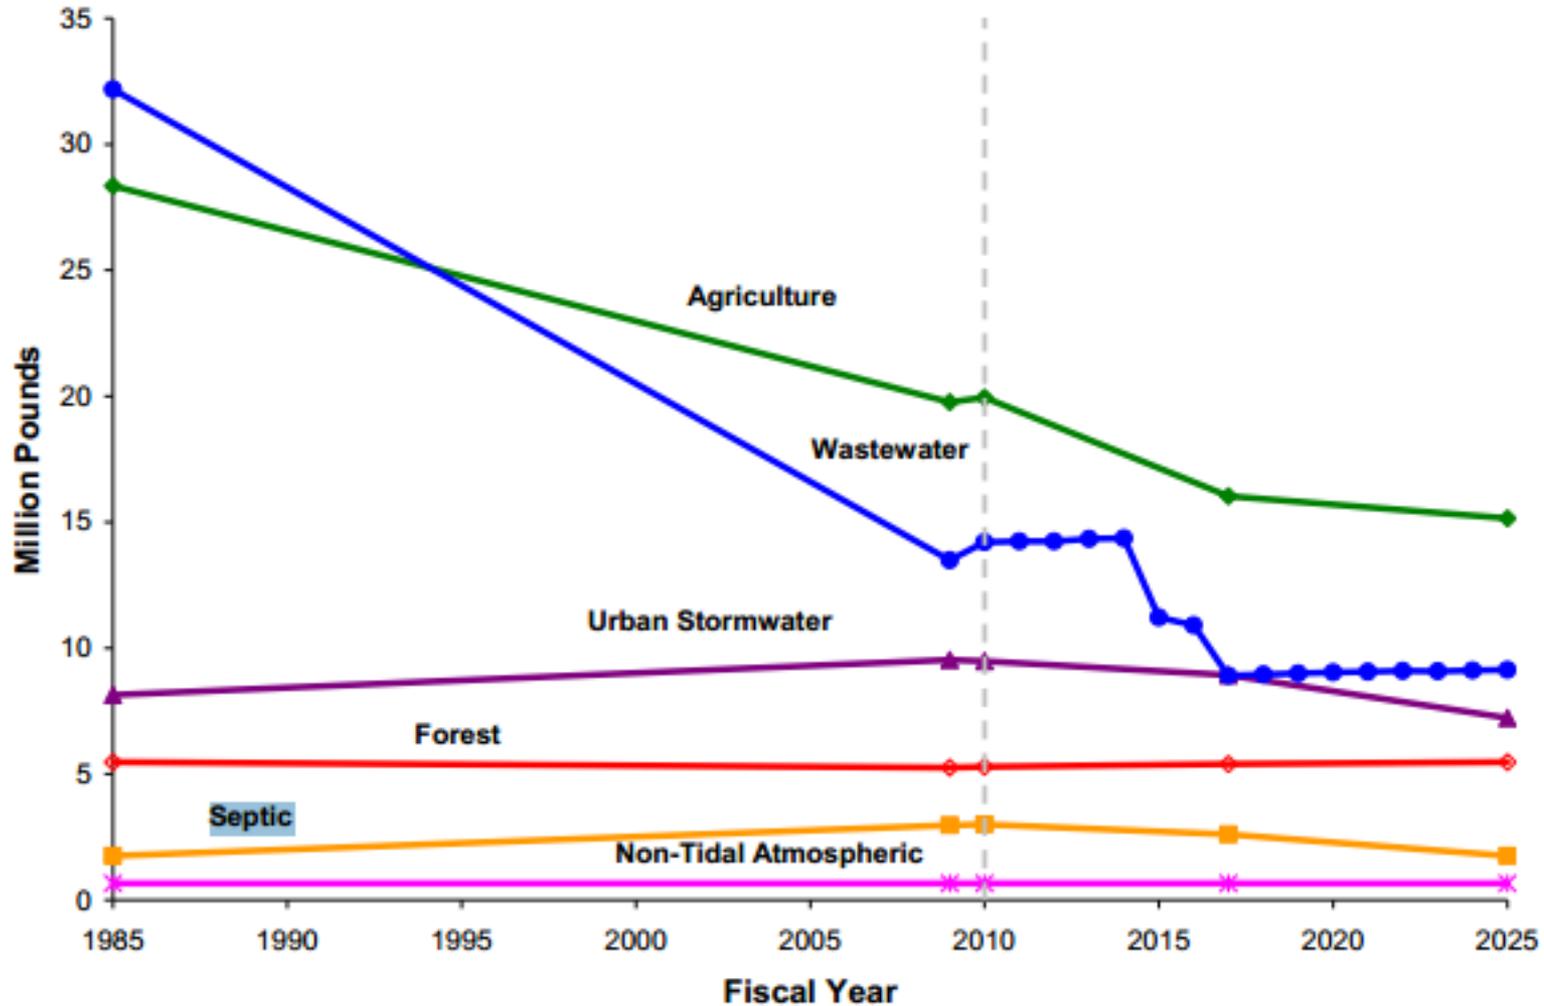

- Increasing demand for food to meet population growth
- Sustaining the viability of producers and agriculture
- Consumer expectations for safe food and sustainable practices

Nitrogen Loads to Chesapeake Bay

2009 Total Delivered Nitrogen by Sector 245.8 million lbs/year

Nitrogen Loads Past and Future in Maryland

Agriculture Watershed Implementation Plan Goals

WIPs 2010 - 2017	TN %	TN M lbs	TP %	TP M lbs	Sed. %	Sed M lbs

Implement a system for delivering conservation practices that:

- Considers local priorities, needs, and opportunities
- Integrates science that supports the continued improvement of practices to meet our objectives
- Achieves the highest return on our investment
